

Augmented reality for English as a foreign language

Transforming primary school students' English as a Foreign Language Learning with Augmented Reality

The AR4EFL partners have created an innovative educational package based on AR technology for primary school teachers that will guide and support their English as second language teaching.

The Teachers Handbook gives an insight in to AR (augmented reality) and the benefits of using it in the classroom, and also includes a number of lesson plans that include speaking, reading writing and listening exercises.

The lesson plans include exercises such as memory games, bingo, writing imaginative stories, mental maths challenges, and much more, ensuring learning is fun and interactive for the students.
